**BALANCING BEADS®**

*bringing the world into balance*

## Fleet Vehicle Balancing

All fleet companies have 3 chief operating expenses; fuel, tires and maintenance. ABC Balancing Beads has a positive effect in each of these key operating costs.

### ◉ *Fuel savings*

The memory technology of the tempered glass beads inside the tire provides a reduction in rolling resistance and has a proven 2.2% savings in fuel economy.

### ◉ *Extended Tyre Life*

ABC Beads completely balance wheel-ends; providing a smooth ride and cooler running tire temperatures. These key factors promote an even tread-wear and extend tyre life.

### ◉ *Reduced Maintenance Costs*

ABC Balancing Beads adjust to compensate for either a sudden change or progressive change in the state of tire balance by migrating to the balance position.

## Motorcycle Balancing

ABC Balancing Beads allows motorcycles to have a better footprint for stability in the corners and at high speeds. It also gives the vehicle better traction, longer tyre life, along with a much smoother and enjoyable ride.

## Passenger Vehicle Balancing

The beads stay in place inside the tyre and migrate opposite the heavy areas of the tyre. This allows for rocks or uneven wear to be compensated for - keeping the tyre in perfect balance. These beads also balance the axle end to give a very smooth ride for the driver and reduce fatigue. All of this adds savings to your bottom line.

**24 - 1oz BAGS**

#### **Includes:**

24 - valve cores  
24 - valve caps

**18 - 2oz BAGS**

#### **Includes:**

18 - valve cores  
18 - valve caps

**12 - 3oz BAGS**

#### **Includes:**

12 - valve cores  
12 - valve caps

# PERFECT BALANCING EVERYTIME

## Pros of ABC Balancing Beads

- 1) ABC Beads are in a continual state of re-adjustment while you're moving. Keeping your bike balanced continually and reducing the need for manual rebalancing.
- 2) Eliminates need to purchase and maintain/calibrate balancing machines required for external balancing, thus reducing your cost of maintenance.
- 3) Eliminates loss of clip-on or clamp-on flange weights and tape-on weights in service.
- 4) Eliminates galvanic corrosion on wheels at point of lead weight attachment.
- 5) Eliminates need for inventory of different sizes of external weights.
- 6) Reusable and environmentally friendly.
- 7) Balances the complete axle-end in all wheel positions.
